Numbers will vary depending on many factors, such as ambient temperature, humidity, and substrate porosity. Estimator Sheet accounts for all steps in the system. Let square footage of the job be your guide. For example, if a job is **1300 sq. ft.**, simply add the columns of each product in the 300 and 1000 columns. So, **Additive** is 8 + 25 = 33 gallons. **Aggregate** is 5 + 15 = 20 bags. **Top Coat** is 3 + 10 = 13 gallons (accounts for two coats.)

### LACE TEXTURE

Job Sq. Ft.	100	200	300	400	500	600	700	800	900	1000
Gallons <b>Additive</b>	3	5	8	10	13	15	18	20	23	25
